

## INVEGA® (PALIPERIDONE)

INVEGA® (paliperidone) Extended-Release Tablets are indicated for the treatment of schizoaffective disorder as monotherapy and an adjunct to mood stabilizers and/or antidepressant therapy.

**Dosage:** Typically patients begin at a low dose of medication and the dose is increased slowly over several weeks.

The dose of the tablets usually ranges from 3 mg to 12 mg. The dose of the Sustenna® brand of long-acting paliperidone injection formulation usually ranges from 78 mg to 234 mg every month. The dose of the Trinza® brand long-acting paliperidone injection formulation ranges from 273mg to 819mg every 3 months. The dose of Hafyera™ brand long-acting paliperidone injection formulation ranges from 1,092 mg to 1,560 mg every 6 months. Only your health care provider can determine the correct dose for you.

## AUSTEDO® (DEUTETRABENAZINE)

Austedo® is a brand name for deutetrabenazine. This medication is used to treat involuntary movements caused by tardive dyskinesia or Huntington's disease.

**Dosage:** Initial dose is typically 6mg/day, increased weekly by 6mg/day to a maximum of 48 mg/day. Total daily doses over 12 mg/day should be divided into 2 or more doses. Maximum single dose should not exceed 18mg in CYP2D6-poor metabolizers.

## INGREZZA® (VALBENAZINE)

Ingrezza (valbenazine) is used to treat tardive dyskinesia and chorea associated with Huntington's disease (HD), which are both body movement disorders. Ingrezza works by decreasing the amount of dopamine, in the nerve endings in the brain, which helps control body movements.

**Dosage:** Initial dosage of INGREZZA is 40 mg once daily for one week. After the first week, 80 mg is recommended once daily, but 40 mg or 60 mg once daily may be considered based on individual treatment needs, response, and tolerability.
